

DS SMITH TO INVEST €120M IN THREE GERMAN SITES, BUT CLOSE BERLIN FACTORY

It has been widely reported that DS Smith is planning on expanding three of its plants in Germany, with an investment in the region of €120m. The funds are being allocated for upgrading of the three sites, with the aim of increasing capacity throughout the German market:

- Nördlingen will get around €75m of the project, to include a new corrugator and high-rack storage system;

- Arenshausen will receive approximately €35m for site upgrades and new converting equipment;
- Arnstadt will benefit from almost €10m, specifically for converting equipment.

The company has said it will be closing the factory in Berlin, saying that it is no longer economically viable to keep it open.

SMS
SIAM MODIFIED STARCH

SMS C300 is a modified tapioca starch product, applied in a corrugated board adhesive formulations. SMS C300 is suitable for use on single facer and double backer for all types of corrugated board and glue kitchen

Easily Dissolved

character as peak viscosity during dissolution is low

Stable Viscosity

gives a more consistent operate on the machine and a better board quality

Good Water Retention

which leads to better bonding strength

Less Consumption

Less Consumption of glue due to better distribution allowing good bond strength with less glue.
